

Instructions for viewing IVC videostreams of IVC classes:

1. To view a pre-recorded videostream, you must have Windows Media Player or Apple QuickTime installed on your computer.
2. You also need a high speed connection via cable. Videostreams or recordings may not work over a wireless broadband connection but will work over a wireless network that is part of a high speed campus or company network.
3. Using Internet Explorer, go to the following URL: <http://134.39.50.192>
4. If using QuickTime on a new Mac, you may be able to view the steam using Safari.
5. Find the appropriate class recording by date and time.
6. Click on the "Play" button.
7. If prompted for a password enter "007".
8. Be advised that due to server space limitations, recordings of IVC classes may be removed or deleted after 7 days of when class was conducted live.
9. Also students need to know that we do not record all IVC classes. We only make recordings upon requests from faculty in advance of when the class session that needs to be recorded is held.
